

2. BEGININGS OF CONSTRUCTION (Neoiticum)

B Construction trades, organization of the construction

(sacral and) defensive construction, organized by the community:

physical and supernatural defense •communal=defensive spaces •family huts

NO specified building trades

- ploughmen (peasants) build their buildings for their own usage

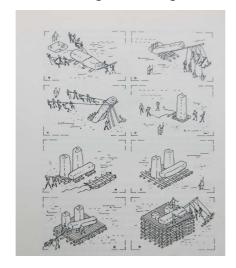

mining (e.g. mining of ochre) and metalworking are the first seceding trade

2. BEGININGS OF CONSTRUCTION (Neoiticum)

Temporary structures and construction equipment

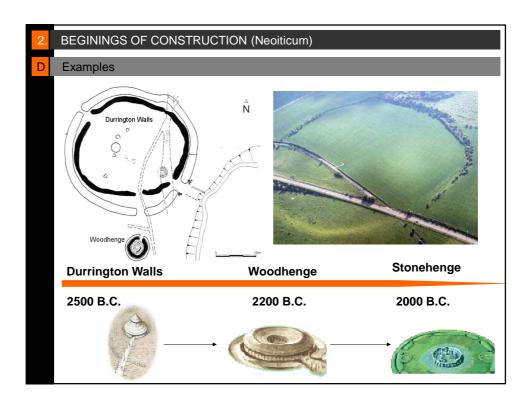

Pile scaffolding, roller, sledge

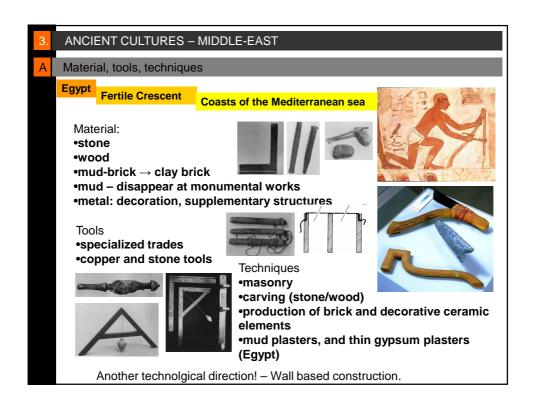

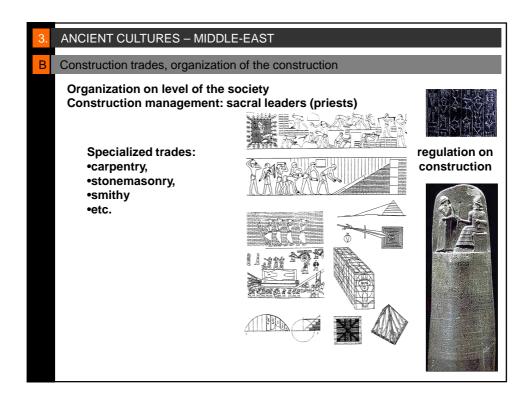

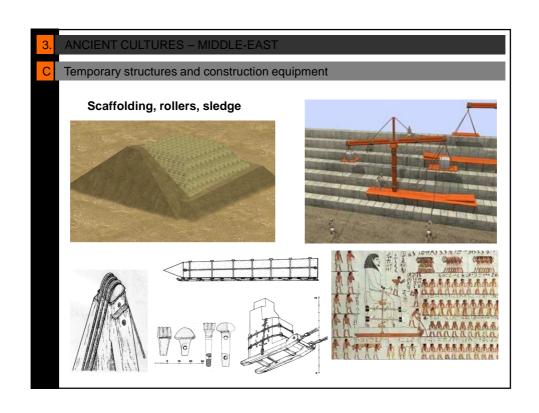

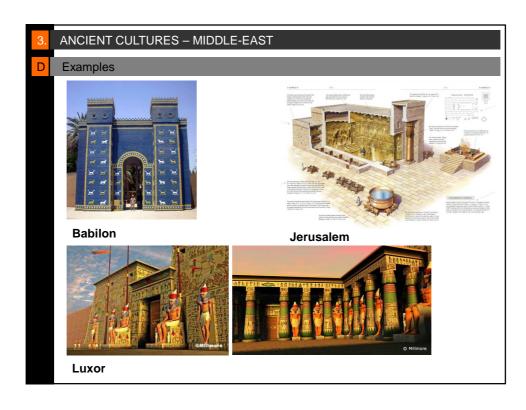

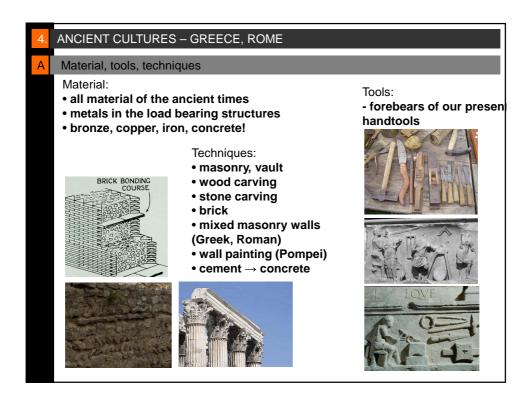

ANCIENT CULTURES – GREECE, ROME

B Construction trades, organization of the construction

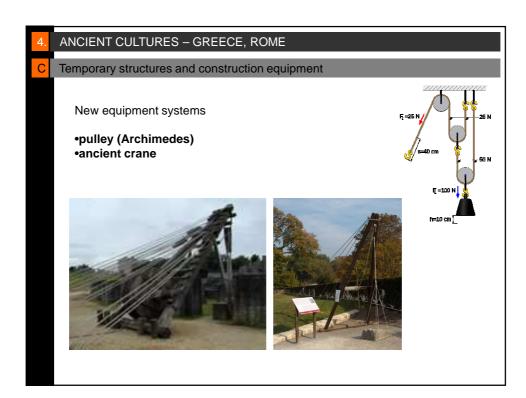

Organization on the level of the society, specialized trades: carpenter, mason, etc.

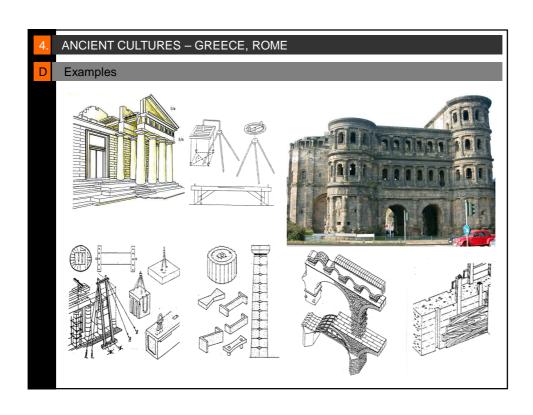

Regulations, construction law etc.

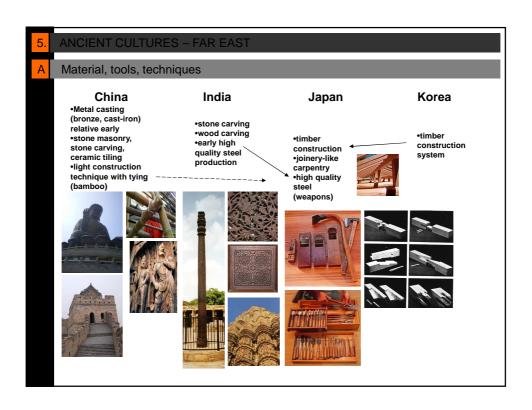

The first known standards and technical specifications (Greece)

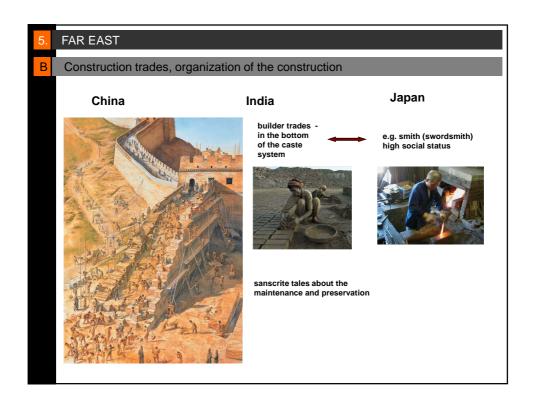

Rome: the separation of the theoretical and practical knowledge novelty: engineering! – military engineering

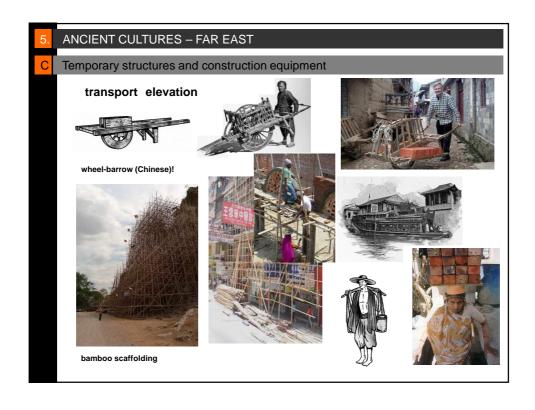

technical establishment, infrastructure: road network, aquaduct, tunnels (Greece)

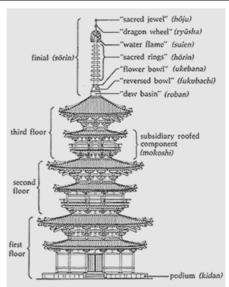

ANCIENT CULTURES - FAR EAST Examples

ANCIENT CULTURES - AMERICA

Material, tools, techniques

Aztec 1150 -900 B.C.

early preclassical period (olmec towns - near to San Lorenzo) earth walls, stone statues

up to 1200 A.D. - toltec and zapotec indian cultures city-states, trade, stonemasonry,

classical period

(Tikal, Teotihuacan, Palenque) •monumental stone architecture, maya scluptures and statues 900 -1519 A.D.

(prgressive development of the maya city-states – La Venta, El

•mud walls, earth pyramids
•stone masonry is developed to the end of the period, stone scluptures, wall paintings, picturewrighthing, stuck-like decoration

900 B.C. - 250 A.D. preclassical period

Mirador, Tikal)

250 -900 A.D.

aztec invasion – conquest of the local cultures - Teonochtitlán is the capital of the aztec empire - up to the spanish conquest

Maya

up to the 12th century B.C. small states of different tribes at the lake Titicaca

from the 11-13th century B.C. to the spanish conquest progressive development of the inca empire
•high technical and mathematical knowledge •road network, bridge building, fortified towns

classical period
(Tula, Chichen Itza, Mayapan – up
to the spanish conquest)
•decadent society, high technical knowledge - big multicultural cities

B Construction trades, organization of the construction

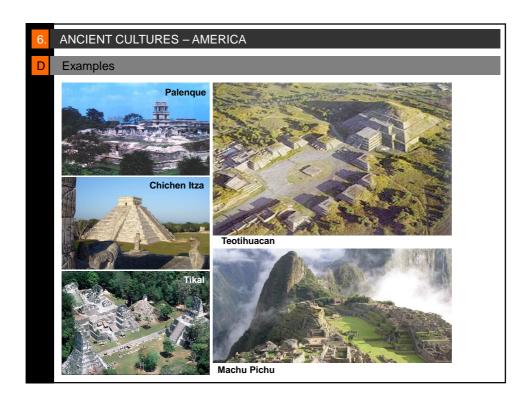

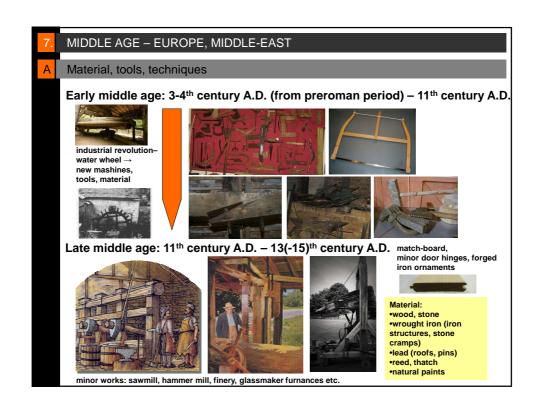

wheel, roller were unknown!

•in the early periods - non-differential societies
•after the classical periods - hierarchical social systems

6. ANCIENT CULTURES – AMERICA Temporary structures and construction equipment scaffolding transport

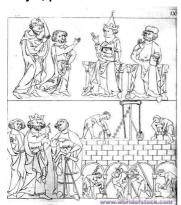

7. MIDDLE AGE – EUROPE, MIDDLE-EAST

B Construction trades, organization of the construction

Organization of construction on the level of the community:

- •familiar
- •larger community (settlement)
- •clerical (monastery, closter)
- •royal, partician

regulations

 \rightarrow e.g. fire protection, street width

standards (local, regional) for measuring units representation by guild system (for each trade)

trades:

- •carpenter
- •thatcher
- •mason, stonemason
- •joiner
- •glass maker
- $\bullet smith \rightarrow locksmith$

7. MIDDLE AGE – EUROPE, MIDDLE-EAST

Temporary structures and construction equipment

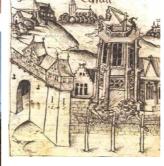

wolf

treadwheel crane

wheel-barrow, wagon

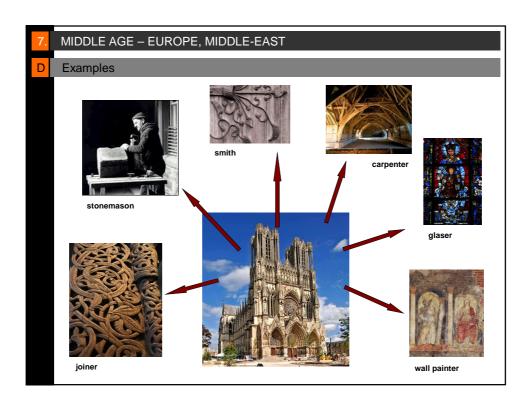

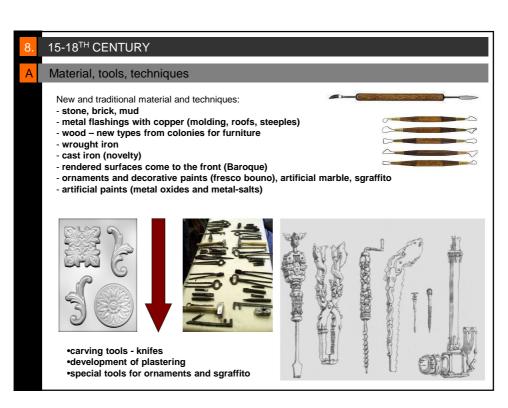

Evolution of transport and elevation!

restrained console scaffolding

15-18TH CENTURY

Construction trades, organization of the construction

The construction based on:

•medieval traditions of the construction ·military knowledge

•development of the nature sciences and the mathematics •colonisation

organization on the level of the society and smaller communities, private construction

•carpenter •mason •joiner •plasterier •upholsterer •thatcher, roof tiler •smith, locksmith

•glazier •stonemason more and more strict construction regulations for property insurance, fire protection, quality insuranc

Large-scale technical facilities:

•large bridges (stone, wrought iron, cast iron) •dams (Holland)

•dome and tower structures

•mine structures

15-18[™] CENTURY

Temporary structures and construction equipment

Scaffoldings, transportation, elevation

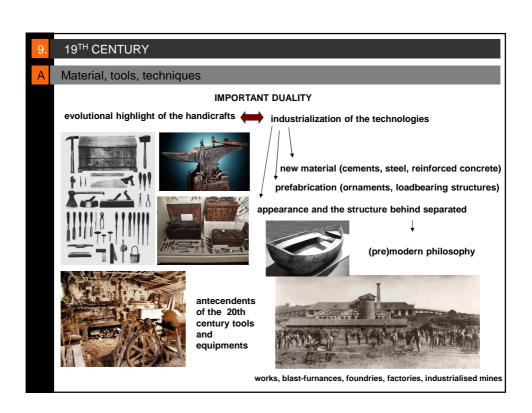

1677

19TH CENTURY

Construction trades, organization of the construction

strong specialized trades (e.g. 8-10 kind of smithy / ironwork)

organisation of construction on every level of the society

New trades at the end of the century: e.g. formwork carpenter, concrete reinforcement worker, insulation worker, ironworker

Re-organisation of the reperesentative organisations of the professions end of the guilds

•special technical school system for the vocations and professions

detailed acts for construction and for special fields (e.g. monument preservation)

19TH CENTURY

Temporary structures and construction equipment

wooden scaffolding

elevation: steam,

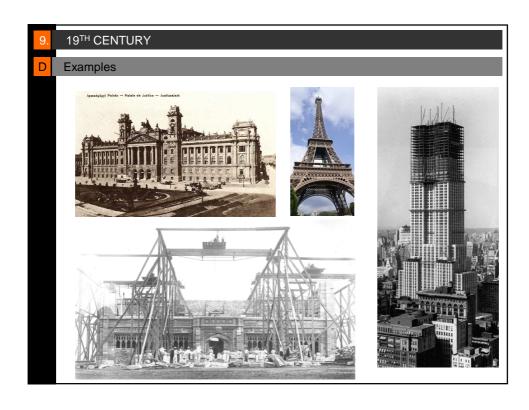

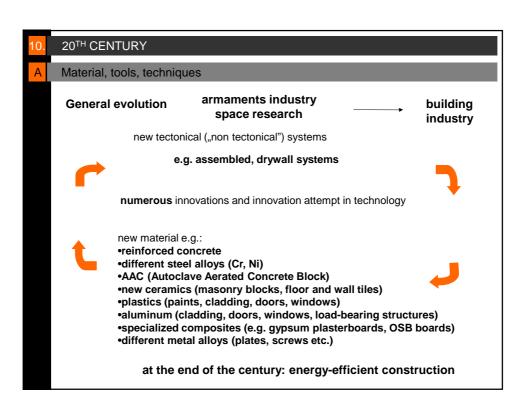

transport: animal power, railway, ship

10. 20TH CENTURY

B Construction trades, organization of the construction

construction trades are determined by construction law

international standards ISO, CE

quality management TQM

safety regulations

continuous development of new trades:

- insultation works
- dry wall system works
- electrical works
- building installation works

construction management - on different levels

the phase out (transformation) of vernacular architecture

20[™] CENTURY

Temporary structures and construction equipment

general automation

scaling in time, and volumen

 $modern \ (aluminum, steel) \ scaffoldings \ and \ formworks$

electic, hydraulic elevators

20[™] CENTURY

Examples
